

## **Kitware and Velodyne Release Next Generation, Open-source Software**

Posted on [September 25, 2013](#) by [lidar](#)

Now this is interesting and important. In order to facilitate the broadest use of VeloView and encourage further community involvement, [Velodyne LiDAR](#) and [Kitware](#) have worked together to release VeloView as an [open-source project](#).

VeloView empowers real-time, 3D visualization of LiDAR data from Velodyne's HDL sensors and is built on Kitware's ParaView technology and underlying Visualization Toolkit (VTK). The open-source VeloView provides an easy-to-use and modern-style tool for visualization and processing of Velodyne's data-rich, 3D LiDAR sensors, supporting live sensor streams and run-time display of previously captured data.

Have a look.
